

Does this remind you of your bandwidth?

• Enterprise • Carrier • Point to Point • Dedicated Ring

Has increased traffic and information sharing turned your network speed into a trickle?

At DATACENTER.BZ, it's our job to ensure your network **never** feels constrained, and that your business is **always** empowered to control the speed.

DATACENTER.BZ enables businesses in the central Ohio area by providing a platform for customized dark fiber solutions. Our service addresses **enterprise clients**, as well as **telecommunication carriers**, and allows them to control the rising costs of access to high bandwidth.

Imagine having the flexibility to:

- Pay the same price each month, regardless of the bandwidth you use
- Upgrade from MB speeds to GB speeds simply by changing your equipment
- Upgrade bandwidth and service level options without increased monthly costs
- Have any service you want, any time you want it
- Run multiple circuits over a single pair of fiber
- Schedule your own service and maintenance windows
- Burst to any speed and not incur increased costs

What makes DATACENTER.BZ **different** than other dark fiber providers? Our dedication to customer service, accuracy of our timeline commitments, and personal project management are only the beginning. We also pride ourselves in offering a technically sound solution that your company will have confidence in:

- **Path Diversity** – Many of our fiber routes are different than those offered by other providers
- **Smaller rings** – We offer several options for SONET rings, some being quite small. You'll no longer have to pay for long routes to gain access to a full ring.
- **Lateral builds** – DATACENTER.BZ will also build the lateral into your business so there's no need to go to two vendors
- **Maintenance and testing** – We constantly monitor the quality of the network to ensure our clients receive best-in-class service
- **Quality of our fiber** – We only put top-of-the-line fiber in the ground, ensuring the integrity of your investment
- **Our fiber also terminates** at our Tier IV, **carrier neutral** datacenters located in Columbus. Should you need to light the fiber, you can access 17 carriers from the datacenters, and they're all ready to serve your bandwidth needs.

Envision a fiber infrastructure that your business controls, where the bandwidth is a function of equipment **you** own, can be changed at any time, and **the price never increases**. Sound interesting? **Contact DATACENTER.BZ today** to see how we can create a network that empowers your business.
